

GEIL KILNS

**DYNAMIC
RESULTS**

"We have used Geil Kilns in our studio for over 25 years. The addition of a shuttle kiln has been a great workhorse allowing us to load large scale works with ease. Our Geil DL-54FS is 18 years old and has about 150 firings completed, from bisque to cone 11 high temperature firings, the kiln has always been consistent with temperature and results. The temperature microprocessor and auto-damper controllers have given us more control during firings and easier to document. When making large scale work, we use the pilot ring system for pre-heating to assure thorough drying before bisque firing. I especially like the low maintenance & efficiency of the fiber version. Glaze results also tend to be more vibrant in this format. Ease-of-use, dependability, and efficiency makes Geil Kilns the best."
