

The **Bailey AutoFire** does all the work!

The ceramics team at San Jose State

“We really appreciate the consistent beautiful glazes from our **Bailey 30C AutoFire Shuttle Kiln**. We’re able to program it for a variety of firing profiles. The results are always spot on. Whether we’re firing copper reds or shinos, bisque or mid-range; the temperature uniformity is completely even from top to bottom. Better yet, with Bailey’s reliable computer controlled AutoFire system, we don’t need to be there to maintain the firing so it fires throughout the night and we’re able to unload and reload on our own schedule. Talk about efficiency, a Cone 10 firing only costs about \$8. Bailey builds a great kiln!”
